

Bunbun and Me

How to make things for your new friend

Hello! A **bunbun** lives on your shelf now. It is a real little friend — it gets hungry, it gets sleepy, it plays, and it loves you.

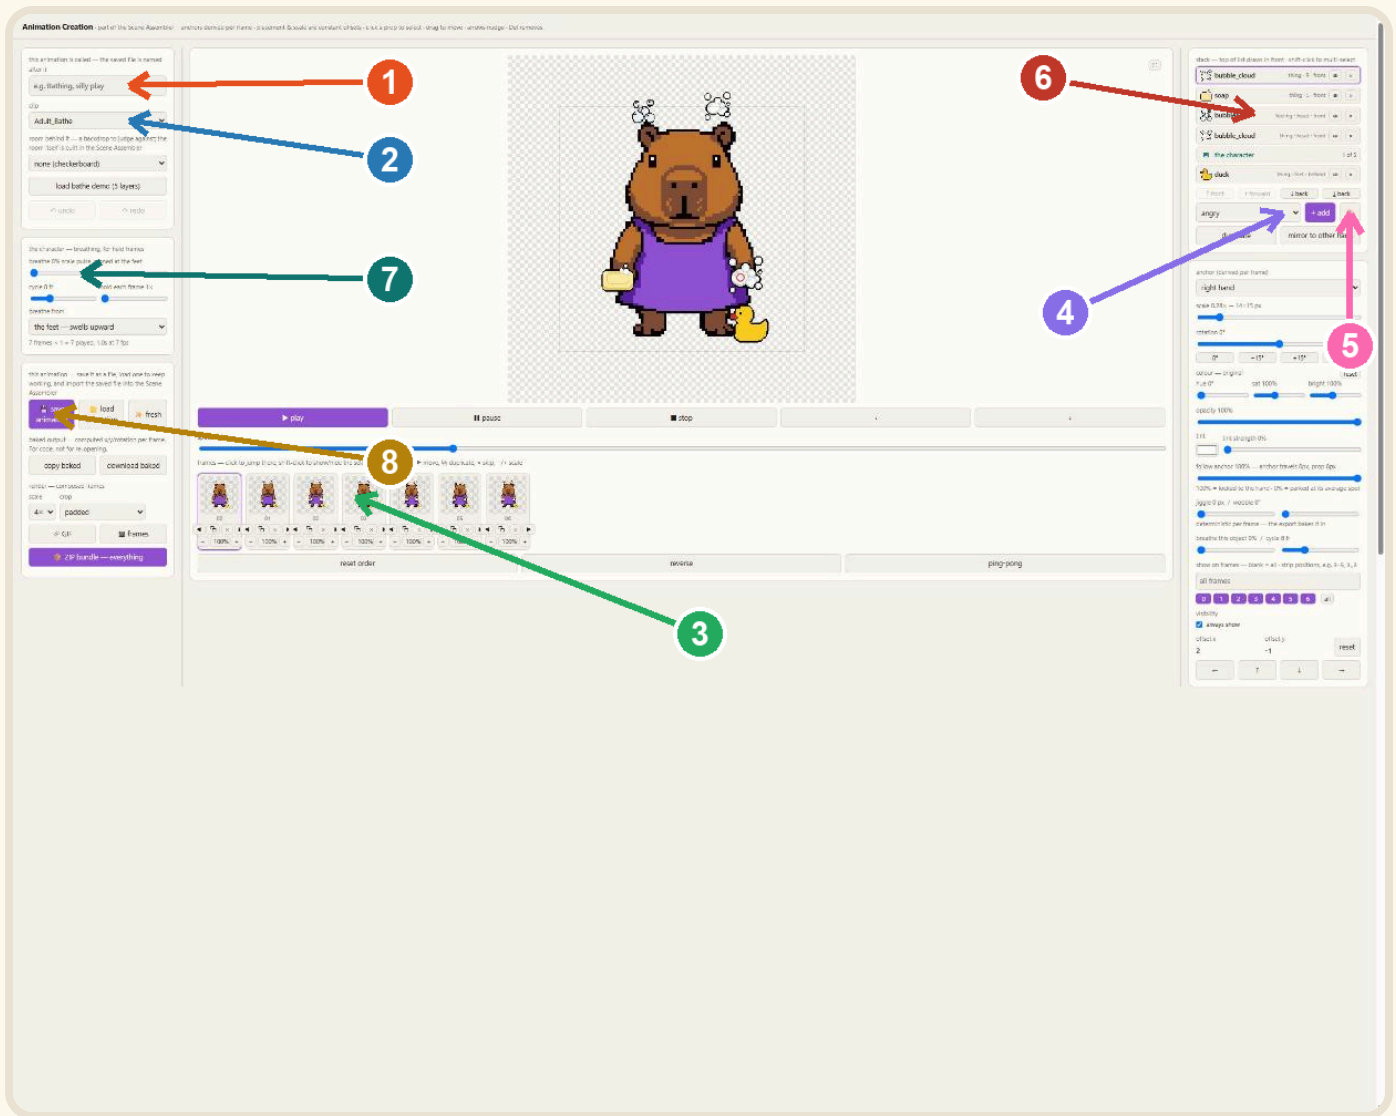

The coolest part: **YOU get to build its world**. You can make its animations, draw its things, build its room, and press one button to put it all on your bunbun's screen.

And don't worry — **you cannot break anything**. Not your bunbun, not your work. Everything saves by itself, and your bunbun always wakes up safe in the morning.

Page 1: Animation Creation — make bunbun DO something

This page makes **one move** — like eating a snack, or a silly dance, or a nap. Ask a grown-up to open it for you, then follow the numbers:

★ **Pick your animal!** Bunny, penguin, frog, cat, dog, capybara, croc... whoever you pick stays your animal all the way to the screen.

1 Name it! Like "Munching Snacks" or "Super Nap".

2 Pick what bunbun is doing. Eating? pick the Eat one. Sleeping? pick Sleep. This is how the game knows what your move IS.

3 The little film strip. Each picture is one moment. Click them, move them, copy them — that's how the move dances.

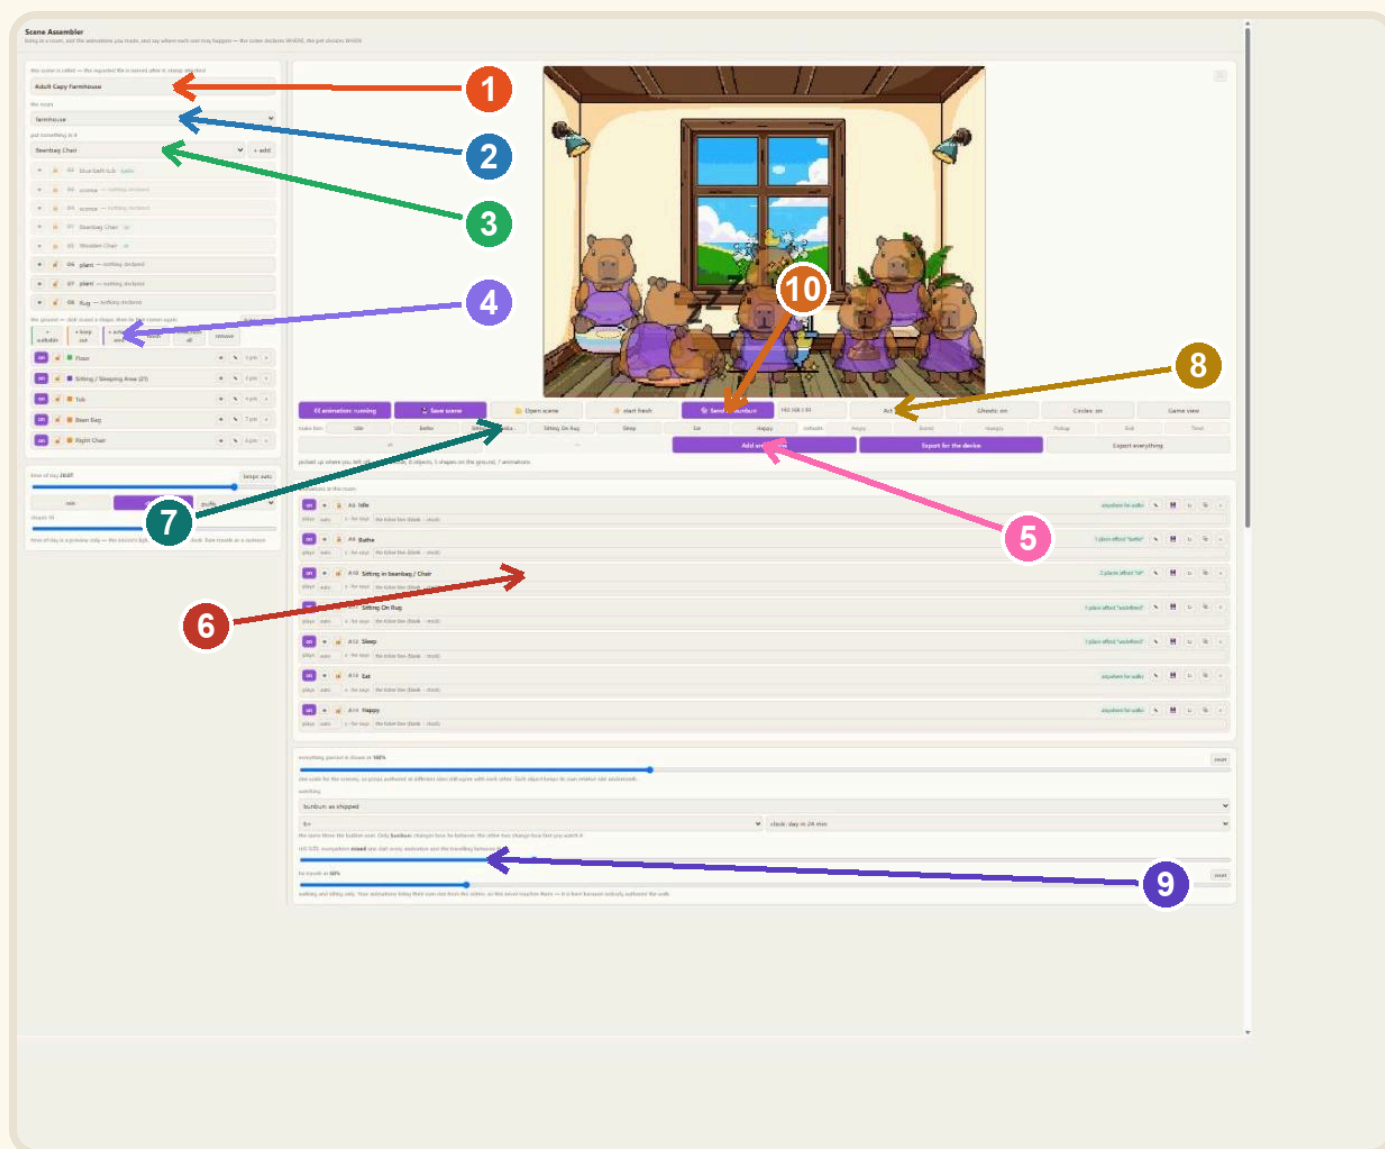

4 + add gives bunbun things to hold — a soap, a duck, a snack. You can put them in a hand, on the head, anywhere.

5 The paintbrush lets you DRAW YOUR OWN thing! Draw a cookie and bunbun can really hold it.

- 6 The **stack** is the pile of things. Top of the list is in front.
- 7 **Breathing** makes bunbun look alive when it holds still. Try around 5 — you'll see its tummy go up and down.
- 8 **Save!** Your move becomes a little file. You'll bring it to the next page.

Page 2: Scene Assembler — build bunbun's WORLD

This page is the room where bunbun lives. Follow the numbers:

The screenshot shows the 'Scene Assembler' interface. On the left is a 'Scene Assembly' panel with a tree view of the scene hierarchy. In the center is a 3D preview window showing a room with a window, a lamp, and several cartoon characters (bunbun and others). On the right is a 'Scene Assembly' panel with a list of objects and their properties. Numbered callouts point to various elements:

- 1: Points to the 'Scene Assembly' panel header.
- 2: Points to the 'Scene Assembly' panel tree view.
- 3: Points to the 'Scene Assembly' panel tree view.
- 4: Points to the 'Scene Assembly' panel tree view.
- 5: Points to the 'Scene Assembly' panel tree view.
- 6: Points to the 'Scene Assembly' panel tree view.
- 7: Points to the 'Scene Assembly' panel tree view.
- 8: Points to the 'Scene Assembly' panel tree view.
- 9: Points to the 'Scene Assembly' panel tree view.
- 10: Points to the 3D preview window.

- 1 Name your world.
- 2 Pick the room.

- 3 **Put things in** — a bathtub, a bean bag, plants, a rug. Drag them where you like.
- 4 **Draw the ground.** Green = where bunbun may walk. Red = "walk through, but don't stand around here". Purple = a special spot you can name.
- 5 **Add animations** — the moves you saved on Page 1 come in here.
- 6 **Each move gets its own row.** Here you choose WHERE it happens, how many seconds it plays, and **what bunbun SAYS** — your own words show on bunbun's screen! There's also **counts as**: tell the game your move is the eating one, the bath one, the job, the toilet, or the sleep — then the buttons know to use YOURS.
- 7 **make him**: press any move to watch bunbun do it right now. Great for testing!
- 8 **Act it out** turns the room ON — bunbun walks around and lives in it, right on your screen.
- 9 **HIS SIZE** — one slider makes bunbun bigger or smaller everywhere. One size for everything looks best.
- 10  **save a bunbun package!** The magic button. It packs your WHOLE world — every room, every move, your drawings — into one little file. Then ask a grown-up to open your bunbun's own page (<http://your-bunbun/build>) and give it the file. Your bunbun checks itself before and after, so your friend is always safe.

More rooms! A kitchen, a bathroom, a job

See the box that says "this room is..."? That's how one room becomes a whole HOUSE:

-  **The kitchen** (out the left side) — put a food spot in it and mark your eating move **counts as: eating**. Press FEED and bunbun walks out the door, through the kitchen, and eats YOUR meal.
-  **The bathroom** (left too) — a toilet, a tub, a sink. Bunbun goes potty **all by itself** every so often — and it always washes its hands after. You taught it that!
-  **The work room** (out the right side) — give it a job move (**counts as: his job**). Press WORK and bunbun goes and does two little jobs, has a wander, and comes home. Working makes bunbun proud.

Bunbun always walks out the side of the screen, through the middle of the next room, does its thing, and comes back home. Home is where it sleeps — on the sleepy spot you picked.

The sky is yours too! The **rain**, **clouds** and **stars** buttons put real weather in your windows — and the sun crosses the sky in the day, the moon at night, on the real clock. Draw a **sky box** where the sky shows and the clouds float exactly there.

✨ What happens next

Your bunbun starts living in **your** world. It decides things by itself, like a real pet:

- When it's hungry it looks hungry — press **FEED** and it walks over and eats **your** eating move.
- Press **BATH** and it goes to the tub you placed and does **your** bath.
- At bedtime it walks to the sleepy spot you picked, and sleeps till morning. It **ALWAYS** wakes up.
- Every so often it needs the potty — off it goes, and washes its hands after.
- A little cat comes to visit, naps on the chair, and sometimes knocks things over. Bunbun huffs... and tidies up.
- The rest of the time it wanders, sits where you said sitting happens, and says the words you wrote.

No two days are ever the same, because bunbun makes its own little choices.

Three friendly rules:

- 💙 Your work saves itself. If something looks stuck, just refresh the page — everything you made is safe.
- 💚 If a message pops up at the bottom, read it — the page is telling you what it needs (like "give something the eat power first").
- 💜 Take care of your bunbun. It's yours.
